

### Lake Development on Brownfield Sites:

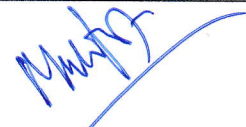

Lake is a large body of water and is of great value to human beings. They moderate the climate of the surroundings; maintain the aquatic eco-system, enhance natural beauty, and provide recreation. It also helps to replenish groundwater. From the very beginning of the establishment of ULAB, there was a dilapidated lake filled with water hyacinth. In fact it was regarded as Brownfield.

The Management of ULAB feels that, healthy lakes and their shores not only provide us with a number of environmental benefits but they influence our quality of life. In view of maintaining of eco-system and enhancing the beautification of the University campus, the Management of the ULAB planned to redevelop the brownfield.

Some facts about redevelopment of brownfield site:

- It appears in the permanent campus of ULAB
- Redeveloped in 2020
